

Answers & Mark Scheme — QUEST-Style Sample Paper — Creative Comprehension

Total marks: 12

Q1 A. 12 [1]

Paragraph 2 states 'a team of twelve volunteers joined the reserve's three rangers'.

Q2 A. 0.7 km [1]

The map labels the leg from the Visitor Centre to Otter Pond as 0.7 km.

Q3 A. 0.5 km [1]

The four labelled legs add up to $0.7 + 0.6 + 0.9 + 0.8 = 3.0$ km. Since the whole loop is 3.5 km (paragraph 1), the missing final leg is $3.5 - 3.0 = 0.5$ km.

Q4 A. To protect the herons from disturbance while they are nesting. [1]

Paragraph 4 quotes Elena Okafor explaining the screen was put up because the herons 'are nesting a little earlier than usual', so the team is 'keeping that section quieter until the chicks fledge'.

Q5 A. Remove or look behind the screen. [1]

The notice states: 'Please keep noise to a minimum and do not remove or look behind the screen.'

Q6 A. Herons [1]

The chart shows 9 heron sightings, fewer than otters (34), kingfishers (21) or deer (27).

Q7 A. The temporary screen at Heron Hide makes them harder for visitors to see. [1]

The notice explains a screen now blocks the view into Heron Hide to protect nesting birds; this, not a lack of herons, explains why visitor-logged sightings of herons are lowest even in nesting season.

Q8 A. 0 [1]

The visitor log shows 0 visitors in Week 2, when the reserve states the trail was fully closed.

Q9 A. 30 [1]

Week 5 (395) minus Week 4 (365) = 30 more visitors.

Q10 A. 410 in Week 1; Week 5 (395) is close but has not quite reached it. [1]

Week 1 (before the storm) recorded 410 visitors. Week 5 recorded 395, which is close to but still 15 below the pre-storm level, matching the article's description of numbers 'climbing back towards' the usual level rather than having fully returned.

Q11 A. The Visitor Centre. [1]

Paragraph 5 states the guided walk starts 'from the Visitor Centre'.

Q12 A. Old Oak Bridge [1]

The map's route runs Heron Hide → Old Oak Bridge → Meadow Picnic Area, matching paragraph 2's description of the bridge being 'near the halfway point of the loop'.
